## *Knee Preservation*

If you are suffering from a knee problem, it's time to see an orthopedic **knee** expert!

At TOCA, you will meet with one of the area's top orthopedic surgeons, Dr. Gerald Yacobucci. He will work hard to put together a **Knee Preservation** plan specific to your knee problem and your specific goals.

### *Why is Knee Preservation beneficial?*

*Not all knee cartilage problems or knee arthritis conditions, require you to go through a Total Knee Replacement. It's always best to preserve as much of your undamaged natural knee joint as possible...and **Cartilage Restoration** or **Partial Knee Replacement** will allow that to happen.*

**Opting for minimally-invasive knee preservation procedures is beneficial because you:**

- Can minimize recovery time
- Can rebuild your body's tissues
- Gain strength and mobility in your joint
- Avoid losing healthy bone and cartilage

*\*Our team of experts are dedicated to advancing the field through thoughtful and groundbreaking clinical research, teaching, & publications in leading journals ensuring that every patient receives the highest standard of care that TOCA has to offer.*

**TRUSTED, CARING,  
FOCUSED ON YOU SINCE 1949**
